## Freight Transportation Profile—South Dakota Freight Analysis Framework

Understanding future freight activity is important for matching infrastructure supply to demand and for assessing potential investment and operational strategies. To help decisionmakers identify areas in need of capacity improvements, the U.S. Department of Transportation developed the Freight Analysis Framework (FAF), a comprehensive national data and analysis tool, including county-to-county freight flows for the truck, rail, water, and air modes. FAF also forecasts freight activity in 2010 and 2020 for each of these modes. Information about the methodology used in developing FAF is available on the Office of Freight Management and Operations' website www.ops.fhwa.dot.gov/freight.

The U.S. freight transportation network moves a staggering volume of goods each year. Over 15 billion tons of goods, worth over \$9 trillion, were moved in 1998. The movement of bulk goods, such as grains, coal, and ores, still comprises a large share of the tonnage moved on the U.S. freight network. However, lighter and more valuable goods, such as computers and office equipment, now make up an increasing proportion of what is moved. FAF estimates that trucks carried about 71 percent of the total tonnage and 80 percent of the total value of U.S. shipments in 1998. By 2020, the U.S. transportation system is expected to handle about 23 billion tons of cargo valued at nearly \$30 trillion.

## **South Dakota**

Table 1 presents information on freight shipments that have either an origin or a destination in South Dakota. As shown in the table, trucks moved a large percentage of the (tonnage) and (value) of shipments. Figures 1 and 2 show freight flows on the highway and rail modes.

Truck traffic is expected to grow throughout the state over the next 20 years. Much of the growth will occur in urban areas and on the Interstate highway system (Figures 3 and 4). Truck traffic moving to and from South Dakota accounted for 13 percent of the average annual daily truck traffic (AADTT) on the FAF road network. Approximately 12 percent of truck traffic involved in-state shipments, and 18 percent involved trucks traveling across the state to other markets. Nearly 57 percent of the AADTT were not identified with a route-specific origin or destination.

Table 2 shows the top five commodity groups shipped to, from, and within South Dakota by all modes. The top commodity by weight and value is farm products.

Table 1. Freight Shipments To, From, and Within South Dakota: 1998, 2010, and 2020

SOUTH DAKOTA	<b>Tons</b> (millions)			<b>Value</b> (billions \$)		
	1998	2010	2020	1998	2010	2020
State Total	67	92	108	37	66	102
By Mode						
Air	<1	<1	<1	2	4	7
Highway	55	76	90	34	60	91
Other <sup>a</sup>	<1	<1	<1	<1	<1	<1
Rail	12	15	18	2	2	3
Water	0	0	0	0	0	0
By Destination/Market						
Domestic	66	90	105	36	65	99
International	1	2	2	1	2	3

Note: Modal numbers may not add to totals due to rounding.

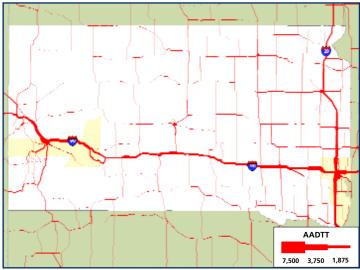

<sup>&</sup>lt;sup>a</sup> The "Other" category includes international shipments that moved via pipeline or by an unspecified mode.

Figure 4. Estimated Average Annual Daily Truck Traffic: 2020

Federal Highway Administration

Table 2. Top Five Commodities Shipped To, From, and Within South Dakota by All Modes: 1998 and 2020

	Tons (millions)			<b>Value</b> (billions \$)	
Commodity	1998	2020	Commodity	1998	2020
Farm Products	41	52	Farm Products	15	24
Secondary Traffic <sup>a</sup>	4	13	Secondary Traffic <sup>a</sup>	5	21
Food/Kindred Products	4	9	Food/Kindred Products	4	14
Clay/Concrete/Glass/Stone	4	9	Transportation Equipment	2	5
Petroleum/Coal Products	3	6	Chemicals/Allied Products	2	5

<sup>&</sup>lt;sup>a</sup> Secondary traffic is defined as freight flows to and from distribution centers or through intermodal facilities. No commodities are assigned to this intermediate step in the transportation process.

Bruce Lambert Office of Freight Management and Operations Federal Highway Administration 202-366-4241 bruce.lambert@fhwa.dot.gov

November 2002 FHWA-OP-03-050 EDL 13728 A series of FAF products are available on the website noted below. FAF outputs include freight flow maps for states, modes, and gateways; detailed databases on traffic flows and commodity movements; information on the methodologies used to develop FAF; and forecast assumptions.

The U.S. Department of Transportation, Bureau of Transportation Statistics (BTS) is also developing a series of state transportation profiles. For more information and to obtain a copy of the BTS reports, please call 202-366-DATA.
